

SN. 10/648,692

ATTORNEY DOCKET NO. YAMA:036

IN THE CLAIMS

*The status of the claims as presently amended is as follows:*

1. *(Original)* An information processing apparatus comprising:

a storage section storing tone reproducing digital data including information indicative of notes to be sounded and tone generating time lengths of the notes;

a readout section that, in response to a readout instruction, reads out the tone reproducing digital data from said storage section;

a note extraction section that extracts, from among the tone reproducing digital data read out by said readout section, notes meeting a predetermined condition;

a data change section that changes the information indicative of the tone generating time lengths of the notes extracted by said note extraction section, to thereby perform a quantizing process on the notes; and

an output section that reproduces or outputs, to external equipment, the tone reproducing digital data having been changed by said data change section.

2. *(Original)* An information processing apparatus comprising:

a storage section storing tone reproducing digital data including information indicative of notes to be sounded and a tone color of the notes;

a readout section that, in response to a readout instruction, reads out the tone reproducing digital data from said storage section;

a note extraction section that extracts, from among the tone reproducing digital data read out by said readout section, notes meeting a predetermined condition;

a data change section that changes the information indicative of the tone color of the notes extracted by said note extraction section; and

an output section that reproduces or outputs, to external equipment, the tone reproducing digital data having been changed by said data change section.

3. *(Original)* An information processing apparatus comprising:

a storage section storing tone reproducing digital data including information indicative of tone generating intensity levels and tone generating time lengths of notes to be sounded;

a readout section that, in response to a readout instruction, reads out the tone reproducing digital data from said storage section;

SN. 10/648,692

ATTORNEY DOCKET NO. YAMA:036

a note extraction section that extracts, from among the tone reproducing digital data read out by said readout section, notes meeting a predetermined condition regarding either or both of the tone generating intensity level and tone generating time length;

a data change section that deletes the notes extracted by said note extraction section; and

an output section that reproduces or outputs, to external equipment, the tone reproducing digital data having the extracted notes deleted therefrom by said data change section.

4. *(Original)* An information processing apparatus comprising:

a storage section storing tone reproducing digital data including information indicative of tone generating intensity levels and tone generating time lengths of notes to be sounded;

a readout section that, in response to a readout instruction, reads out the tone reproducing digital data from said storage section;

a data change section that changes the tone reproducing digital data read out from said storage section, by adding new tone generating events to the digital data on the basis of a predetermined algorithm; and

an output section that reproduces or outputs, to external equipment, the tone reproducing digital data having the new tone generating events added thereto by said data change section.

5. *(Original)* An information processing apparatus as claimed in claim 1 which further comprises:

a counter section that counts a number of times the tone generating digital data are read out from said storage section, and

a determination section that, on the basis of the number of times counted by said counter section, determines whether or not a change process should be performed on the read-out tone reproducing digital data.

6. *(Original)* An information processing apparatus as claimed in claim 1 which further comprises:

a payment information storage section that stores payment information indicative of payment made by a user for a necessary charge; and

SN. 10/648,692

ATTORNEY DOCKET NO. YAMA:036

a determination section that, on the basis of the payment information stored in said payment information storage section, determines degree of a change to be made by said data change section to the tone reproducing digital data.

7. *(Original)* An information processing apparatus as claimed in claim 1 which further comprises:

a history information storage section that stores change history information including information indicative of contents of a change made by said data change section to the tone reproducing digital data; and

a restoration section that, on the basis of the change history information stored in said history information storage section, restores the tone reproducing digital data, changed by said data change section, to original tone reproducing digital data.

8. *(Original)* An information processing apparatus as claimed in claim 1 which further comprises:

a history addition section that adds, to the tone reproducing digital data, change history information including information indicative of contents of a change made by said data change section to the tone reproducing digital data; and

a restoration section that, on the basis of the change history information included in the tone reproducing digital data, restores the tone reproducing digital data, changed by said data change section, to original tone reproducing digital data.

9. *(Original)* An information processing method comprising:

a storage step of storing tone reproducing digital data including information indicative of notes to be sounded and tone generating time lengths of the notes;

a readout step of, in response to a readout instruction, reading out the tone reproducing digital data stored by said storage step;

a note extraction step of extracting, from among the tone reproducing digital data read out by said readout step, notes meeting a predetermined condition;

a data change step of changing the information indicative of the tone generating time lengths of the notes extracted by said note extraction step, to thereby perform a quantizing process on the notes; and

an output step of reproducing or outputting, to external equipment, the tone reproducing digital data having been changed by said data change step.

SN. 10/648,692

ATTORNEY DOCKET NO. YAMA:036

10. *(Original)* An information processing method comprising:

a storage step of storing tone reproducing digital data including information indicative of notes to be sounded and a tone color of the notes;

a readout step of, in response to a readout instruction, reading out the tone reproducing digital data stored by said storage step;

a note extraction step of extracting, from among the tone reproducing digital data read out by said readout step, notes meeting a predetermined condition;

a data change step of changing the information indicative of the tone color of the notes extracted by said note extraction step; and

an output step of reproducing or outputting, to external equipment, the tone reproducing digital data having been changed by said data change step.

11. *(Original)* An information processing method comprising:

a storage step of storing tone reproducing digital data including information indicative of tone generating intensity levels and tone generating time lengths of notes to be sounded;

a readout step of, in response to a readout instruction, reading out the tone reproducing digital data stored by said storage step;

a note extraction step of extracting, from among the tone reproducing digital data read out by said readout step, notes meeting a predetermined condition regarding either or both of the tone generating intensity level and tone generating time length;

a data change step of deleting the notes extracted by said note extraction step; and

an output step of reproducing or outputting, to external equipment, the tone reproducing digital data having the extracted notes deleted therefrom by said data change step.

12. *(Original)* An information processing method comprising:

a storage step of storing tone reproducing digital data including information indicative of tone generating intensity levels and tone generating time lengths of notes to be sounded;

a readout step of, in response to a readout instruction, reading out the tone reproducing digital data stored by said storage step;

a data change step of changing the tone reproducing digital data read out by said readout step, by adding new tone generating events to the digital data on the basis of a predetermined algorithm; and

SN. 10/648,692

ATTORNEY DOCKET NO. YAMA:036

an output step of reproducing or outputting, to external equipment, the tone reproducing digital data having the new tone generating events added thereto by said data change step.

13. *(Original)* A program containing a group of instructions for causing a computer to perform an information processing method comprising:

a storage step of storing tone reproducing digital data including information indicative of notes to be sounded and tone generating time lengths of the notes;

a readout step of, in response to a readout instruction, reading out the tone reproducing digital data stored by said storage step;

a note extraction step of extracting, from among the tone reproducing digital data read out by said readout step, notes meeting a predetermined condition;

a data change step of changing the information indicative of the tone generating time lengths of the notes extracted by said note extraction step, to thereby perform a quantizing process on the notes; and

an output step of reproducing or outputting, to external equipment, the tone reproducing digital data having been changed by said data change step.

14. *(Original)* A program containing a group of instructions for causing a computer to perform an information processing method comprising:

a storage step of storing tone reproducing digital data including information indicative of notes to be sounded and a tone color of the notes;

a readout step of, in response to a readout instruction, reading out the tone reproducing digital data stored by said storage step;

a note extraction step of extracting, from among the tone reproducing digital data read out by said readout step, notes meeting a predetermined condition;

a data change step of changing the information indicative of the tone color of the notes extracted by said note extraction step; and

an output step of reproducing or outputting, to external equipment, the tone reproducing digital data having been changed by said data change step.

15. *(Original)* A program containing a group of instructions for causing a computer to perform an information processing method comprising:

a storage step of storing tone reproducing digital data including information indicative of tone generating intensity levels and tone generating time lengths of notes to be sounded;

SN. 10/648,692

ATTORNEY DOCKET NO. YAMA:036

a readout step of, in response to a readout instruction, reading out the tone reproducing digital data stored by said storage step;

a note extraction step of extracting, from among the tone reproducing digital data read out by said readout step, notes meeting a predetermined condition regarding either or both of the tone generating intensity level and tone generating time length;

a data change step of deleting the notes extracted by said note extraction step; and

an output step of reproducing or outputting, to external equipment, the tone reproducing digital data having the extracted notes deleted therefrom by said data change step.

16. *(Original)* A program containing a group of instructions for causing a computer to perform an information processing method comprising:

a storage step of storing tone reproducing digital data including information indicative of tone generating intensity levels and tone generating time lengths of notes to be sounded;

a readout step of, in response to a readout instruction, reading out the tone reproducing digital data stored by said storage step;

a data change step of changing the tone reproducing digital data read out by said readout step, by adding new tone generating events to the digital data on the basis of a predetermined algorithm; and

an output step of reproducing or outputting, to external equipment, the tone reproducing digital data having the new tone generating events added thereto by said data change step.

17. *(Currently Amended)* An information processing method for use in an information communication network including a server of a data provider and a user terminal that receives tone reproducing digital data from said server, ~~wherein said server performs the method~~ comprising:

a step of ~~[[pre]]~~storing payment information indicative of payment ~~to be~~ that have been made by ~~said~~ a particular user terminal for tone reproducing digital data;

a step of receiving, from said particular user terminal, a request for supply of tone reproducing digital data;

a step of reading out the tone reproducing digital data designated by the request for supply received by said step of receiving;

a step of reading out the stored payment information of said particular user terminal in response to the request;

SN. 10/648,692

ATTORNEY DOCKET NO. YAMA:036

a step of, on the basis of the read-out payment information ~~of the tone reproducing digital data read out by said step of reading out~~, determining whether or not a change process should be performed on the read-out tone reproducing digital data and determining the degree of change to be made by said change process to the read-out tone reproducing digital data;

a step of, when it is determined that the change process should be performed, performing the change process on the read-out tone reproducing digital data in accordance with the determined degree of change, and outputting the tone reproducing digital data having been subjected to the change process, wherein said step of performing includes extracting notes meeting a predetermined condition from the read-out tone reproducing digital data and performing the change process on the extracted notes; and

a step of transmitting the output[[ted]] tone reproducing digital data.

18. *(Currently Amended)* An information processing method for use in an information communication network including a server of a data provider and a user terminal that receives tone reproducing digital data from said server, ~~wherein said server performs the method~~ comprising:

a step of [[pre]]storing payment information indicative of payment ~~to be~~ that have been made by said a particular user terminal for tone reproducing digital data and storing ~~readout reproduction~~ restriction information corresponding to the payment information of the particular user terminal;

a step of receiving, from said particular user terminal, a request for supply of tone reproducing digital data;

a step of reading out the tone reproducing digital data designated by the request for supply received by said step of receiving;

a step of reading out the stored reproduction restriction information of said particular user terminal in response to the request;

a step of adding, to the tone reproducing digital data read out by said step of reading out, the read-out reproduction restriction information corresponding to the payment information ~~of the read-out tone reproducing digital data~~;

a step of outputting the ~~read-out~~ tone reproducing digital data having said reproduction restriction information added thereto; ~~and~~

a step of transmitting the output[[ted]] tone reproducing digital data to said particular user terminal[[.]];

~~said user terminal performs:~~

SN. 10/648,692

ATTORNEY DOCKET NO. YAMA:036

a step of receiving the tone reproducing digital data transmitted by said server by said particular user terminal;

a step of storing the tone reproducing digital data received by said ~~step of receiving~~ particular user terminal;

a step of detecting [[a]] the request made by [[a]] said particular user terminal for readout of tone reproducing digital data;

a step of reading out the tone reproducing digital data designated by the request detected by said step of detecting;

a step of, on the basis of the ~~readout reproduction~~ restriction information that have been added to of the tone reproducing digital data read out ~~by said step of reading out~~, determining whether or not a change process should be performed on the read-out tone reproducing digital data and determining the degree of change to be made by said change process to the read-out tone reproducing digital data; and

a step of, when it is determined that the change process should be performed, performing the change process by said particular user terminal on the read-out tone reproducing digital data in accordance with the determined degree of change, wherein the step of performing includes extracting notes meeting a predetermined condition from the read-out tone reproducing digital data and performing said change process on the extracted notes: [[.]] and

a step of outputting the tone reproducing digital data having been subjected to the change process.

19. (New) The information processing method according to claim 17, wherein the change process to the read-out tone reproducing digital data include changing any one of a tone generating time length, tone color, or tone generating intensity.

20. (New) The information processing method according to claim 18, wherein the change process to the read-out tone reproducing digital data include changing any one of a tone generating time length, tone color, or tone generating intensity.
